

Eventually periodic gaps decompose into arithmetic residue lanes

selector = residues $\{0,1,3\} \bmod 6$

gap word repeats as $(2, 1, 2)$

0.0 2.5 5.0 7.5 10.0 12.5 15.0 17.5

Each phase class becomes a genuine arithmetic progression

ambient index n

$$n_{3t+2} = 6t + 4$$

$$n_{3t+1} = 6t + 3$$

$$n_{3t} = 6t + 1$$
