

Current status: the schema is specified and audited, but none of the `results/h1/*` artifacts has been materialized yet.

Literature packet

Exoo 1989

Ge 2022

Lehavi 2024

Frontier parents

`results/h1/frontier_parents`

Orbit-distinct extensions

`results/h1/extension_cases`

Failure witnesses

`results/h1/failure_witnesses.jsonl`

Canonical cores

`results/h1/obstruction_cores`

Held-out transfer

`results/h1/transfer_records`

Gate 1

Top canonical cores cover at least 30% of failed orbit-distinct
42 → 43 extensions

Gate 2

Held-out coverage is at least 50% of training-side coverage on the decisive anti-Exoo holdout

Gate 3

Zero known-witness deletions and no family contributes more than 50% of accepted support

Admissible claim

Structural intermediate only if every gate passes; bound movement requires a verified 44-witness or checked 45-impossibility proof

The obstruction-atlas route is therefore a route target only, not an achieved structural contribution.
