

Current frontier: $43 \leq R(5, 5) \leq 46$

Lower-bound movement

To raise the lower bound from 43 to 44, the workflow must output an independently

Upper-bound movement

To lower the upper bound from 46 to 45, the workflow must output a machine-checkable

Claim contract

Everything between these two thresholds is intermediate evidence only. Smaller residues, proxy defect reductions, or unverified filters do not change the frontier.
