

Prime-Separator Recurrence And Certified Prefix

Old square $P_n = A_n B_n$

Choose a_{n+1} as the least integer not in P_n

Only then add the new border products: $A_n b_{n+1}$ and $a_{n+1} B_n$

Choose b_{n+1} as the least integer not in P_n and $\neq a_{n+1}$

The decisive implementation constraint is that b_{n+1} is chosen from the same old square as a_{n+1} . No product involving a_{n+1} or b_{n+1} may influence that choice.

first row $A = (a_n)$

first column $B = (b_n)$
