

Topology Contrast Behind the H1 Falsification Result

Fixed Startup Path

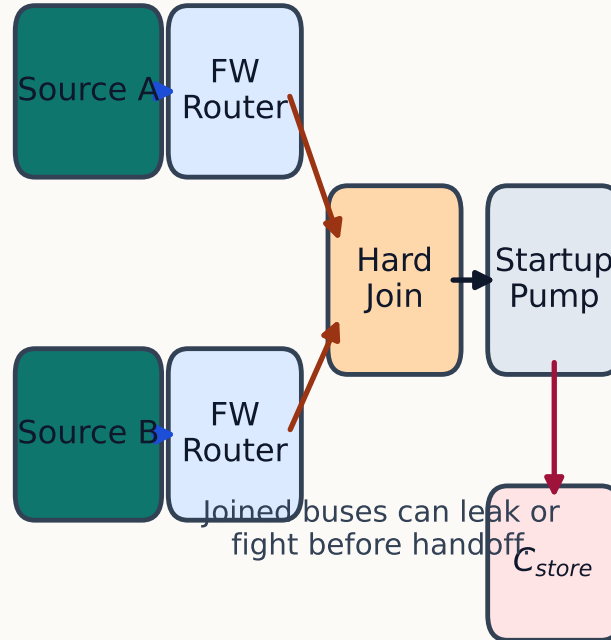

Only one routed branch participates.

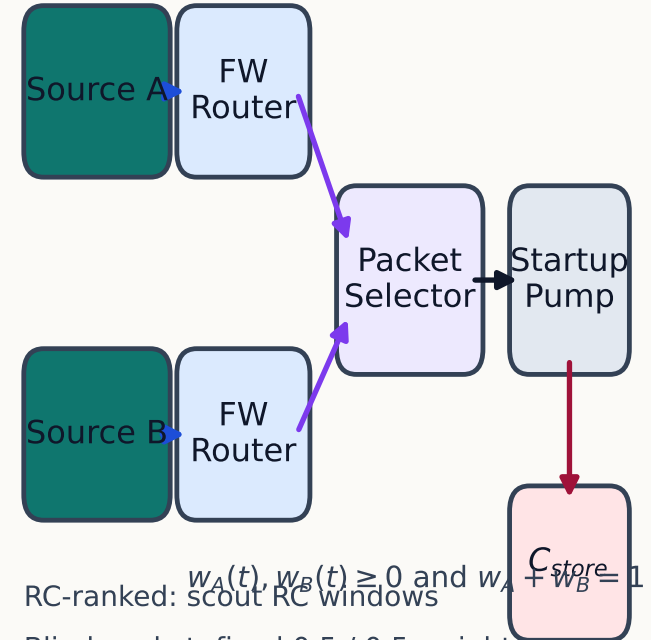

Branch B is measured but unused.

Nonaware Hard Join

Packet-Gated Family

RC-ranked: scout RC windows

Blind packet: fixed 0.5 / 0.5 weights

TC-ranked: fast-slow dual-window score

The decisive comparison is not fixed versus RC-ranked; it is hard join versus packetized isolation, and then source-aware ranking versus blind packet allocation.
